## Improving the campus environment

With over 26,500 students and 6,500 staff, Warwick University wants to support the growing number of electric vehicles with the right infrastructure.

In a busy campus environment active management of the car parking space and responding to demand is important.

## Supporting the growth in EVs

Kirby Corner car park is for regular university staff and one-off visitors. Ten Sevadis Grandis Duo charging units, totalling 20 charging points, were installed in parking bays reserved for EV charging only and a semi-public Sevadis Cloud system set up.

The attractive Sevadis Grandis units are OCPP compliant and have capability to link to the Sevadis Cloud via the web App and with RFID cards - giving Warwick University flexibility in managing the different car park users and information to plan for the future.
