

# SEVADIS

POWERING ELECTRIC VEHICLES

## Case Study

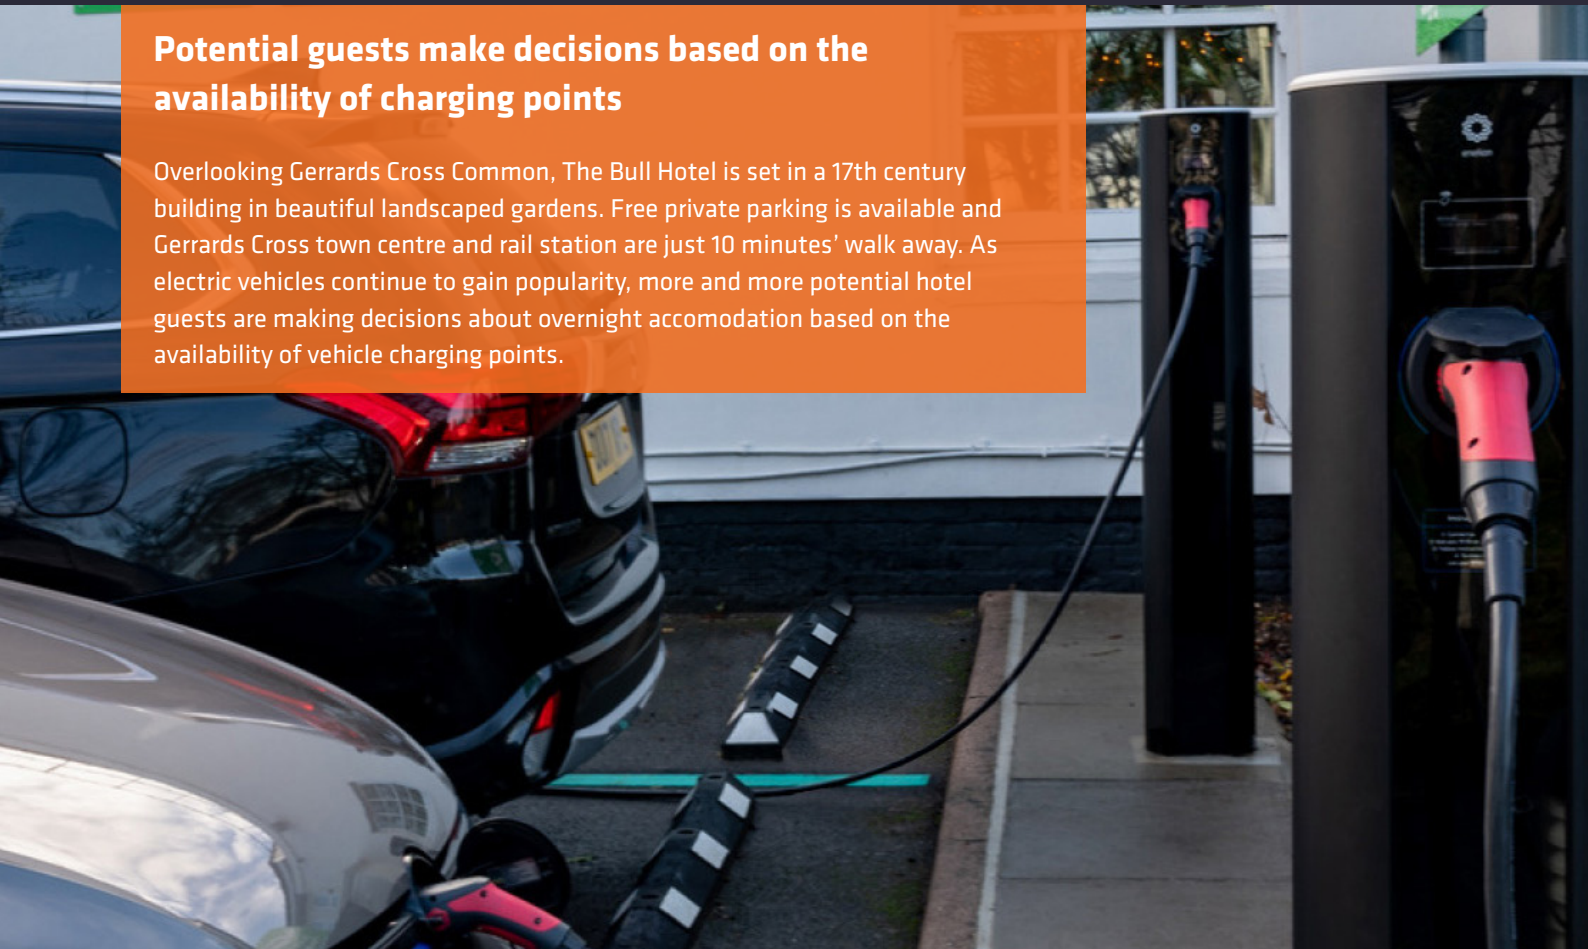

# The Bull Hotel

17th century building set in beautiful landscaped gardens and providing free private parking.

## Potential guests make decisions based on the availability of charging points

Overlooking Gerrards Cross Common, The Bull Hotel is set in a 17th century building in beautiful landscaped gardens. Free private parking is available and Gerrards Cross town centre and rail station are just 10 minutes' walk away. As electric vehicles continue to gain popularity, more and more potential hotel guests are making decisions about overnight accommodation based on the availability of vehicle charging points.

## Sevadis provided aesthetically pleasing chargers

As part of their dedication to customer care, the management team at The Bull recognised this, and contacted Sevadis after having met them at the Independent Hotels Show Exhibition.

The Bull Hotel wanted chargers that were aesthetically pleasing, as the car park is at the front of the hotel. Two duo Sevadis Grandis units were chosen, supplied with the optional high-grade matt black aluminium finish.

The hotel also made the decision to use RFID authentication to control the charging, with a number of cards being available to guests that request them, so that usage can be tracked and recorded.

The installation works were carried out by a Sevadis approved installer, and involved installation of underground cabling from the main incoming supply switch room to the charger locations. The chargers are rated to 22kW, enabling guests to fully charge their cars overnight.
