

THE NEW OZEV GRANT FUNDING EXPLAINED

The UK aims to become a 'net-zero' nation by 2050, and OZEV (Office for Zero-Emission Vehicles) is providing electric vehicle drivers, landlords, apartment block owners and businesses with grant funding towards the purchase and installation costs of EV charging points.

Electrification is happening, and it is happening now! OZEV is enabling drivers and businesses to benefit from significant cost savings when purchasing and installing charging points to support the accelerating growth of electric vehicle ownership. These grant funding incentives are implemented to encourage drivers and businesses to make the transition to cleaner and greener modes of transport to reduce emissions for a better and healthier environment.

Grant funding for home charging point installations

OZEV grant funding is available to provide rental residents, landlords of single and multiple unit properties to alleviate the cost associated with the purchase and installation of charging points.

- **Rental property residents** are eligible for £350 grant funding towards the purchase and installation of their charging point. Residents must have off-street parking and an eligible EV/PHEV to qualify.
- **Landlords and social housing providers** are eligible for £350 grant funding per socket. Although there is not limit to the number of charging sockets per property, applicants can only submit a maximum of 200 grant funding applications per year. This grant funding is applicable for single-unit (flats and houses) and multi-unit (apartment blocks) properties. Properties must have private parking spaces for residential use.

THE NEW OZEV GRANT FUNDING EXPLAINED

Grant funding for workplace charging point installations

The WCS (Workplace Charging Scheme) allows a diverse range of businesses to benefit from grant funding to purchase and install their chosen charging points.

- **Registered businesses** are eligible for up to £14,000 (£350 per charging socket) grant funding towards the purchase and installation of their charging points, allowing staff and fleet drivers to recharge their electric vehicles on site. A maximum of 40 charging sockets are eligible for the WCS per property. The business must also have private parking.
- **Small accommodation businesses** such as B&Bs and holiday lets are eligible for up to £14,000 (£350 per charging socket) grant funding towards the purchase and installation of their charging points. The business must be a registered business, have private parking and have less than 250 employees. A maximum of 40 charging sockets are eligible for the WCS per property.

- **Charities** can also gain from the WCS, benefiting from up to £14,000 (£350 per charging socket) grant funding towards purchasing and installing their charging points. The organisation must be a registered charity and must have off-street parking.
- **Landlords of commercially let properties** are eligible for £350 grant funding per socket. Applicants can only submit a maximum of 100 grants per year. This grant funding is only available for landlords of commercially let properties that have parking dedicated for staff use or fleet use of the tenant or prospective tenant.
- **Small to medium enterprises (SMEs)** are eligible for £15,000 grant funding per building, there are no limits to how many sockets can be installed per building.
