The buzz of redevelopment

Imperial Court has 24 parking bays in their luxury riverside development, running across two floors. In preparation for the growth of electric vehicles, 50% of these parking bays have electric vehicle charge points. This far exceeds the regulatory 20%.

Preparing for future demand

The Sevadis Scatalo Duo wall-mounted EV charger was recommended for its charging speed, attractive contemporary appearance and its ability to integrate with the Sevadis Cloud online management system.

The Sevadis Cloud allows the management company to monitor the electricity usage and put payment tariffs in place. Residents at Imperial Court use RFID cards or the Sevadis Cloud web app to start and stop their EV charging. The electricity is tracked and billed via the Sevadis Cloud online management portal.
