

SEVADIS
POWERING ELECTRIC VEHICLES

Case Study
Freemen's Common

A new 550 space multi-story car park as part of a major redevelopment for Leicester City

Breathing new life into an aging site

Freemen's Common car park is part of a £500 million redevelopment plan to improve particular sites across Leicester City. The overall strategy for Freemen's Common was to breathe new life into the aging site, create new links through the area and into the city centre and provide the highest quality facilities.

Providing the highest quality facilities

The new 550 space public multi-story car park is in a prominent location and open for use by all members of the community.

Sixteen Sevadis Scatalo Duo online charging units, totaling 32 charging points, were installed in parking bays reserved for EV charging only and a fully public Sevadis Cloud system set up to facilitate management and billing of the electricity used.

- ✓ 7.4kW sockets for fast charging
- ✓ Mobile activated charging
- ✓ OCPP 1.6 compliant for software flexibility
- ✓ Built-in dynamic load balancing to protect power supply
