

SEVADIS
POWERING ELECTRIC VEHICLES

Case Study
Catalyst

Phased development of multiple
light industrial units in Bicester

Technology park developed by Albion Land

Catalyst Bicester is a new sustainable business community designed for technology industries, advanced manufacturing and high-performance engineering companies. The buildings are highly sustainable with a BREEAM rating of 'Excellent'.

EV Charging points for staff and visitors

Across the two units a total of forty Maxicharger 7.4kW AC charge points were installed in a range of single, dual and quad pillars. This has created plenty of EV charging facilities for when the sites are occupied.

- ✓ 99% product reliability rate
- ✓ 7.4kW for fast charging
- ✓ Universal Type 2 socket
- ✓ Single, Dual, Quad outlet pillars to optimise usage and space
- ✓ Dedicated account management
